WHAT IS CLAIMED IS:

1. A method for facilitating analysis of a commercial credit customer, comprising:

determining customer information associated with the commercial credit customer, at least some of the customer information being associated with a plurality of commercial credit accounts; and

generating risk information associated with the customer by applying at least one of a plurality of risk models to the customer information.

- The method of claim 1, wherein said determining and generating are performed for a plurality of customers, and further comprising: generating a list of high risk customers based on risk information.
- The method of claim 2, further comprising:
 periodically transmitting information associated with the list to a risk manager via a communication network.
- 4. The method of claim 1, wherein the customer information includes at least one of: (i) a business segment, (ii) a company type, and (iii) a product type.
- 5. The method of claim 1, wherein the customer information includes at least one of: (i) a customer characteristic, (ii) a payment history, (iii) a loss history, (iv) a delinquency status, and (v) an aggregate customer account size.

- 6. The method of claim 1, wherein the customer information includes at least one of: (i) an account characteristic, (ii) a collateral type, (iii) a delinquency status, (iv) an original account size, (v) an account duration, (vi) a total balance, (vii) a maximum total balance within a pre-determined period of time, (viii) an original equipment cost, (ix) a security deposit, (x) payment timing information, and (xi) payment amount information.
- 7. The method of claim 1, wherein the risk information comprises at least one of: (i) a risk score, and (ii) a risk category.
 - 8. The method of claim 1, further comprising:

calculating a risk score based on the risk information, economic information, and deal information.

- 9. The method of claim 1, wherein the risk information is further based on information received from at least one third-party.
- 1 10. The method of claim 9, wherein the received information is 2 associated with at least one of: (i) a customer, (ii) a customer category, and 3 (iii) a plurality of customers.
 - 11. The method of claim 1, wherein the plurality of risk models were created based on historical commercial credit information.
 - 12. The method of claim 11, wherein the plurality of risk models were further created based on at least one of: (i) a segmentation analysis, (ii) a univariate analysis, and (iii) multivariate analysis.

l 13.	The method of claim 1	, further comprising
-------	-----------------------	----------------------

selecting an appropriate risk model to apply to the customer information.

 The method of claim 13, wherein said selecting is based on the customer information.

15. An apparatus, comprising:

a processor; and

a storage device in communication with said processor and storing instructions adapted to be executed by said processor to:

determine customer information associated with a commercial credit customer, at least some of the customer information being associated with a plurality of commercial credit accounts, and

generate risk information associated with the customer by applying at least one of a plurality of risk models to the customer information.

16. The apparatus of claim 15, wherein said storage device further stores at least one of: (i) a customer database, (ii) an account database, (iii) a risk model database, and (iv) an analysis database.

17. The apparatus of claim 15, further comprising:

a communication device coupled to said processor and adapted to communicate with at least one of: (i) an information device, (ii) an accounts receivable system, (iii) a third-party service, and (iv) a risk manager device.

5 6 18. A medium storing instructions adapted to be executed by a processor to perform a method for facilitating analysis of a commercial credit customer, said method comprising:

determining customer information associated with the commercial credit customer, at least some of the customer information being associated with a plurality of commercial credit accounts; and

generating risk information associated with the customer by applying at least one of a plurality of risk models to the customer information.

19. A method of facilitating commercial credit customer analysis, comprising:

identifying a set of historical customers, each historical customer being associated with at least one commercial credit account;

performing a segmentation analysis to determine customer segments; identifying potential variables;

performing univariate analysis on the potential variables to identify potentially predictive variables;

performing multivariate analysis on the potentially predictive variables to select most predictive variables;

establishing risk models using the most predictive variables for each customer segment; and

for a plurality of active customers, periodically:

retrieving internal account data associated with the active customers,

receiving external customer data associated with the active customers,

identifying a subset of the active customers based on the risk models, internal account data, and external customer data, and transmitting a notification associated with the subset of active customers to at least one risk manager via a communication network.
